BANKING PROCESS CLASSIFICATION FRAMEWORK®

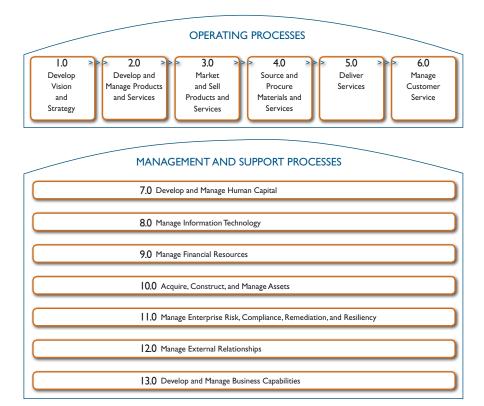

Version 7.2.1

BANKING PCF OVERVIEW

Based on the renowned Process Classification Framework® (PCF), The Banking PCF® is customized to define processes used within organizations around the world. Version 7.2.1 of the The Banking PCF® includes changes to make it compliant with the most recent information in Cross Industry PCF® v7.2.1. This version of the PCF was developed in conjunction with IBM and contains feedbackf rom a variety of individuals within the industry. APQC provided much of the subject matter expertise to create this industry specific process classification framework.

Experience shows that the potential of benchmarking to drive dramatic improvement

lies squarely in making out-of-the-box comparisons and searching for insights not typically found within intra-industry paradigms. To enable this beneficial benchmarking, the APQC Process Classification Framework (PCF)[®] serves as a high-level, industry-neutral enterprise process model that allows organizations to see their business processes from a cross-industry viewpoint. The cross-industry framework has experienced more than 20 years of creative use by thousands of organizations worldwide. The PCF provides the foundation for APQC's Open Standards Benchmarking[®] (OSB) database and the work of its advisory council of global industry leaders. Each version of the PCF will continue to be enhanced as the OSB database further develops definitions, processes, and measures. The PCF and associated measures and benchmarking surveys are available for download from the Open Standards Benchmarking web site at www.apqc.org/osb.

HISTORY

The cross-industry Process Classification Framework® was originally envisioned as a taxonomy of business processes and a common language through which APQC member organizations could benchmark their processes. The initial design involved APQC and more than 80 organizations with a strong interest in advancing the use of benchmarking in the United States and worldwide. Since its inception in 1992, the PCF has seen updates to most of its content. These updates keep the framework current with the ways that organizations do business around the world. In 2014, APQC worked to enhance the cross-industry PCF and updated a number of industry-specific process classification frameworks.

The PCF is written in United States English language format.

LOOKING FORWARD

The cross-industry and industry Process Classification Frameworks are evolving models, which APQC will continue to enhance and improve regularly. Thus, APQC encourages comments, suggestions, and more importantly, the sharing of insights from having applied the PCF within your organization. Share your suggestions and experiences with the PCF by e-mailing pcf_feedback@apqc.org.

ABOUT APQC

An internationally recognized resource for process and performance improvement, APQC helps organizations adapt to rapidly changing environments, build new and better ways to work, and succeed in a competitive marketplace. With a focus on productivity, knowledge management, benchmarking, and quality improvement initiatives, APQC works with its member organizations to identify best practices; discover effective methods of improvement; broadly disseminate findings; and connect individuals with one another and the knowledge,

training, and tools they need to succeed. Founded in 1977, APQC is a member-based non profit serving organizations around the world in all sectors of business, education, and government. APQC is also a proud winner of the 2003, 2004, 2008, 2012, and 2013 North American Most Admired Knowledge Enterprises (MAKE) awards. This award is based on a study by Teleos, a European-based research firm, and the KNOW network.

ABOUT IBM

At IBM, we collaborate with our clients, bringing together business insight, advanced research and technology to give them a distinct advantage in today's rapidly changing environment. Through our integrated approach to business design and execution, we help turn strategies into action. And with expertise in 17 industries and global capabilities that span 170 countries, we can help clients anticipate change and profit from new opportunities. For more information, visit www.ibm.com/services/ qbs.

PCF LEVELS EXPLAINED

Level I - Category

1.0 Develop Vision and Strategy (10002)

Represents the highest level of process in the enterprise.

Level 2 - Process Group

1.1 Define the business concept and long-term vision (17040)

Indicates the next level of processes and represents a group of processes.

Level 3 - Process

1.1.5 Conduct organization restructuring opportunities (16792)

A process is the next level of the decomposition after a process group. This can include core elements needed to accomplish the process as well as element related to variants and rework.

Level 4 - Activity

1.1.5.3 Analyze deal options (16795)

Indicates key events performed when executing a process.

Level 5 - Task

1.1.5.3.1 Evaluate acquisition options (16796)

Tasks represent the next level of hierarchical decomposition after activities. Tasks are more fine grained and vary widely across industries.

PROCESS ELEMENT NUMBERING SCHEME

The PCF identifies each process element using a unique 5-digit reference number following the name of the process element.[i.e., (10002), (17040), (16795), (16795), (16796) shown in the above graphic]. This number will always refer to the conceptual definition of the process element. The actual process elements and actual definition may change, but conceptually the decomposition will remain consistent considering the entire scope of the PCF. A new 5-digit number will be assigned to a process element if its definition substantially changes.

COPYRIGHT AND ATTRIBUTION

APQC and IBM hereby grant you (and, in the case of organizations, your members) a limited, non-exclusive, non-transferable, non-sublicensable license to use, publish, copy, disseminate, display, perform and create derivative works from the APQC/IBM Industry PCFs, provided that (a) you use such Industry PCF(s) only within your organization and do not disseminate it to any third party, and (b) you include the following copyright acknowledgement in all copies of such Industry PCF(s) and all derivatives:
